Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1 25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26 160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Ash, E.G.M., and M. F. O'Connell. 1987. Atlantic salmon fishery in Newfoundland and Labrador, commercial and recreational, 1985. Can. Data Rep. Fish. Aquat. Sci. 672: v + 284 p.

This report provides catch and effort data in the Atlantic salmon commercial and recreational fisheries in Newfoundland and Labrador in 1985. Data from the commercial fishery have been summarized weekly; catches are given by weight and by number for Statistical Sections, Statistical Areas, Management Areas, NAFO Unit Areas and Divisions, Newfoundland Region (insular), Newfoundland Region (Labrador), and Newfoundland Region (total). Historical, catch, effort, and mean weight data are also provided. Maps indicating the various Sections, Areas, etc., into which the Newfoundland Region is divided (Waldron 1974a) are provided. Catch and effort data collected from the recreational fishery are also summarized weekly; data are given by river, Statistical Section, Statistical Area, Gulf Region (Newfoundland portion), Newfoundland Region (insular), Newfoundland Region (Labrador), Newfoundland Region (total), Provincial Summary (insular), Provincial Summary (Labrador), Provincial Summary (total). Scheduled rivers are listed alphabetically and geographically and have been assigned map numbers for quick location on the maps provided. Historical data, 1953-85, are presented for insular Newfoundland, Labrador, and the province.

RÉSUMÉ

Ash, E.G.M., and M. F. O'Connell. 1987. Atlantic salmon fishery in Newfoundland and Labrador, commercial and recreational, 1985. Can. Data Rep. Fish. Aquat. Sci. 672: v + 284 p.

On présente des données sur les prises et l'effort concernant les pêches sportives et commerciales de saumon de l'Atlantique effectuées en 1985 à Terre-Neuve et au Labrador. Les données sur les prises commerciales sont résumées pour chaque semaine de pêche: les pries sont inscrites en poids et en nombre par secteur statistique, zone statistique, zone de gestion, zone-unité et division de l'OPANO ainsi que pour la Région de Terre-Neuve sous les rubriques île, Labrador et total. On fournit aussi des données historiques sur les prises, l'effort et le poids moyen ainsi que des cartes indiquant les divers secteurs, zones, etc., de la Région de Terre-Neuve (Waldron 1974a). Les données sur les prises et l'effort concernant la pêche sportive sont aussi résumées pour chaque semaine d'exploitation en fonction de la rivière, du secteur statistique, de la zone statistique, de la Région du Golfe (Terre-Neuve), de la Région de Terre-Neuve sous les rubriques île, Labrador et total et de la province sous les rubriques île, Labrador et total. Les rivières inscrites à l'annexe du Règlement sont listées alphabétiquement et selon la région géographique; elles portent aussi un code numérique pour en faciliter la localisation sur les cartes présentées. Sont aussi incluses des données historiques pour la période 1953-1985 portant sur la pêche à Terre-Neuve sous les rubriques île, Labrador et total.

Part 1 - Commercial Fishery

INTRODUCTION

This publication continues a series of reports providing catch and effort data from the Newfoundland and Labrador Atlantic salmon (Salmo salar L.) commercial fishery. Data for previous years are available in May and Lear (1971), Lear (1973), Waldron (1974b), Reddin and Waldron (1976), Reddin and Day (1980), Moores and Dawe (1980), Reddin and Short (1981), Short and Reddin (1981a, 1981b), Moores et al. (1984), Ash (1984) and Ash and O'Connell (1986, 1987). Compilation of these data form an integral part in updating the database required to assess and examine the status of insular Newfoundland and Labrador Atlantic salmon stocks.

METHODS

DATA COLLECTION

Data were obtained from three sources: sales slips, local sales estimates; commercial license data. Sales slips or purchase slips were supplied to fish buyers by Fisheries Statistics and Systems Branch, Department of Fisheries and Oceans and designed to include such information as daily catch (lb) by species and size, price per unit weight, fisherman's name, buyer's name, community where fish were landed and type of fishing gear used. In addition, buyers were asked when purchasing salmon to record the number and size of the salmon and state of processing in which they were purchased.

Local sales represent those salmon landings not recorded on purchase slips. These include salmon eaten by the fishermen, given away, or sold directly to consumers. For each community this quantity was estimated monthly by the local fisheries officers and submitted to Fisheries Statistics and Systems Branch on a supplementary purchase slip. Local sales were based on an average obtained from selected fishermen of each community. The accuracy and precision of this estimate are unknown and it may not include all salmon caught in non-salmon gear.

License data were obtained from the Resource Management Division, Licensing Section. These include number of fishermen as well as length (fathoms) and numbers of nets they were licensed to fish.

DATA PROCESSING

Data from Purchase Slips were computer filed by day and by community, then summarized by standardized weeks (Appendix 1) by community, Statistical Section and Statistical Area (Fig. 1 and 2), Fisheries Management Area, NAFO Unit Area and NAFO Division (Fig. 3), the insular Newfoundland portion of the Newfoundland Region, the Labrador portion of the Newfoundland Region, and the entire Newfoundland Region. Salmon catches were reported in different landed states of processing such as round, gutted head-on, or dressed gutted head-off

fish. For consistency, all values were converted to round weights using conversion factors established in 1953 (Reddin and Short 1980). The conversion factors were: (1) gutted, head on (x 1.2) to round weight; (2) dressed gutted, head off (x 1.25) to round weight. All catches recorded in pounds were converted to kilograms. Local sales were reported by month and by community and were proportioned over the month by day according to the daily percentage of monthly plant sales reported on purchase slips. Where local sales were reported for a particular month within which there were no daily catch data, they were divided by the number of fishing days in the month. Weights and percentage of local sales by month appear at the bottom of each table in Appendices 2-9. They have been included in the catch statistics which are shown in the same tables.

In the tables of Appendices 2-9, the adjusted catch and estimated numbers were initially calculated at the community level and summed to the appropriate Statistical Section, Statistical Area, etc.

Landings were recorded in two size categories: small salmon (1SW - one-sea-winter), those less than 2.7 kg; large salmon (MSW - multi-sea-winter), those equal to or greater than 2.7 kg. Unfortunately, buyers often did not record size, usually when size did not affect market value. In these cases landings were recorded as unsized. Also, the proportions of large and small in local sales were not known and these were generally recorded as unsized. The unsized salmon were proportioned into large and small salmon (adjusted catch) by one of two methods. If the total weight of salmon reported as large and small in a week was equal to or greater than 10% of the unsized landings in that week, the unsized salmon were divided into large and small categories according to the proportions of large and small in the sized catch. Alternatively, if the total weight of sized salmon represented less than 10% of the unsized catch, predetermined default proportions of large and small salmon (based on the previous five year mean proportions) were applied to the unsized salmon to divide them into large and small categories.

Small and large mean weights by week were derived from sales slip data that included both weight and corresponding numbers of salmon. Calculations simply involved dividing the total weight by the numbers of salmon reported for each size category. Mean weights were calculated on a weekly basis at the community level, then the weights and numbers of salmon were totaled and redivided at the various other levels. Mean weights for the entire fishing season were calculated from total weight and numbers of fish, not by averaging weekly mean weights.

The estimated numbers of salmon in each size category were derived by dividing current catch data by either the calculated weekly mean weights or predetermined default weekly mean weights. The calculated weekly mean weights were used if in any given week the number of salmon in a size category (sample size) from which the mean weight was obtained was equal to or greater than 50 fish. Default mean weights were used to derive estimated numbers of salmon when the sample size was less than 50 fish in any given week. Default mean weights were the seasonal mean weights which were calculated for the Statistical Area in which the community is located, if the sample size over the

entire season for that particular Area was equal to or exceeded 50 fish. Otherwise, the mean weights from total insular Newfoundland catch data were used. All estimated numbers of salmon were obtained from the community catch statistics by week and then added to produce both weekly and seasonal numbers of fish for Statistical Sections, Statistical Areas, etc.

SUMMARY

The commercial catch of Atlantic salmon in the Newfoundland Region in 1985 was 801 metric tonnes, of which 423 t were small and 378 t were large (Table 1 and Fig. 4). Total catch increased by 13% over 1984 but remained 36% below the previous five-year mean (1980-84). The catch of small salmon was 44% over 1984 but 14% below the five-year mean; the catch of large salmon was 10% below 1984 and 50% below the five-year mean. The amount of gear licensed to prosecute the fishery in the Newfoundland Region in 1985 decreased by 9% from 1984 (Table 3 and Fig. 4).

The total catch for the insular portion of the Newfoundland Region in 1985 was 589 t (Table 2 and Fig. 5). This catch represented an increase of 22% over 1984. The catch of small salmon (347 t) and large salmon (242 t) increased by 42% and approximately 1% respectively over 1984. Effort declined by 10% from 1983. Total catch (211 t) for the Labrador portion of the Newfoundland Region represented a decrease of 8% from 1984 (Table 2 and Fig. 6). The catch of small salmon (76 t) increased by 52% over 1984 while that of large salmon (136 t) decreased by 24%. Effort decreased by 5% from 1984 (Table 3 and Fig. 6).

Landings for each Statistical Area (1974-85) are presented in Table 2. The number of licensed commercial fishermen for each Statistical Area (1975-85) is shown in Table 4. Mean weights of salmon landed (1974-85) are presented by Statistical Area in Table 5. The estimated numbers of small and large salmon landed for the period 1974-85 are represented in Figure 7.

ACKNOWLEDGMENTS

For collecting the data, the authors acknowledge the staff of Fisheries Statistics and Systems Branch and Resource Management Division, Fisheries and Habitat Management Branch. Computer programs were developed by Eric Harvey and L. Feltham of Fisheries Statistics and Systems Branch. Neila Caines assisted with data tabulation and computation. Figures were prepared by Neil Hefford and typing by K. Harding.

Part 2 - Recreational Fishery

INTRODUCTION

This is the thirteenth annual angling data report published since 1973 by the Freshwater and Anadromous Fish Division. It provides data on the catch and effort in the Atlantic salmon recreational fishery in Newfoundland and Labrador in 1985. Data for previous years are available in reports by Button and Wells (1974, 1975), Moores (1976), Moores et al. (1977, 1978), Moores and Tucker (1978, 1979, 1980, 1981), Moores and Ash (1984), Ash and Tucker (1984), and Ash and O'Connell (1986, 1987).

METHODS

The data were provided by the Resource Management Division, Fisheries and Habitat Management Branch, Department of Fisheries and Oceans, Newfoundland and Gulf Regions. Information provided includes observed and reported catch and effort data as well as estimates of unreported catch and effort. The observed and reported data were based on activities actually seen by river guardians or reported to him by others on the river during his surveillance. Estimated unreported data were based on fishing activity that occurred when the river was not patrolled, i.e. days of rest or while patrolling other areas. This was made in consideration of weather conditions, water levels, and the guardian's knowledge of the particular stock migratory pattern. The angling pressure and accessibility to the rivers have increased to such a degree during the last 10 - 15 years that observation and recording of total effort and angling catch have become virtually impossible. The estimated quantity on a weekly basis was incorporated into the angling data in 1974 to provide consistency in the reporting. In 1983, for greater accuracy, this practice was changed so that estimates were made on a daily basis.

This report also includes calculated catch-per-unit-effort (CPUE), defined as the number of fish angled per rod day (a rod day being a day or any part thereof in which an individual angles).

The data were summarized by river, Statistical Section, Statistical Area, insular Newfoundland, Labrador, and the province (Fig. 4 and 5). Rivers were tabulated according to their assigned seven-digit code (Waldron 1974) commencing at Cape Norman on the northern tip of the Great Northern Peninsula and proceeding consecutively and clockwise around insular Newfoundland and into Labrador. The seven-digit codes, developed for quick identification and location of rivers as well as for computer coding, denote not only the individual river numbers but also the Statistical Section (developed by Fisheries Systems and Statistics Branch in 1968) in which the mouth of the river is located. For example: Exploits River is coded 0707790. The number 07 indicates the Statistical Section and the 07790 is the individual river number. A given river can be easily located by using Fig. 4 and 5 in conjunction with the index provided in Appendix 10.

Catch and effort data were presented by week and include number of grilse (< 2.7 kg), number of salmon (≥ 2.7 kg), and percentage grilse. Also given is

the number of days each week that the river was not patrolled (NP), the river was closed to angling (CL), and angling data were collected (DATA). In cases where rivers were reported upon by section and/or tributary, the number of days per week could exceed 7. This reflects the sum total of days for all sections or tributaries.

OPENING AND CLOSURE DATES

The season for Atlantic salmon angling in Newfoundland and Labrador as a whole extended from June 10 to September 15. However, because the timing of migration differs depending on the river, the opening and closing dates varied. Open season for all scheduled rivers during 1985 is listed in Table 1.

Scheduled salmon rivers may have to be closed periodically for reasons such as low water, research, enhancement, conservation, etc. Any such closings are listed in Table 2.

SUMMARY

The total recreational catch of Atlantic salmon in the Newfoundland Region in 1985 was 28,735, of which 28,536 were grilse and 194 were large salmon (Table 3 and Fig. 1). Total catch increased by 6% over 1984. Catches were comparable to the previous five-year mean (1980-84). Effort increased by 3% over 1984 while catch-per-unit of effort (CPUE) was similar to 1984.

For the insular Newfoundland portion of the Newfoundland Region, anglers were only allowed to retain grilse; large salmon had to be released. The catch of grilse (26,527) increased by 7% over 1984 and by 5% over the previous five-year mean (Table 4 and Fig. 2). Effort increased by 3% over 1984; CPUE was similar to 1984. For Labrador (Newfoundland Region), anglers were permitted to retain large salmon. Total catch (2,203) (Table 5 and Fig. 3) declined slightly from 1984 (3%); the catch of grilse (2,009) increased by 3% over 1984 while that of large salmon (194) decreased by 40%. Grilse showed a decline of 26% from the previous five-year mean; large salmon declined by 52%. Effort decreased from 1984 (14%) while CPUE increased (12%).

Catch and effort data for the entire province, i.e. Gulf Region included (insular Newfoundland and Labrador combined) are shown in Table 6; data for insular Newfoundland and Labrador separately are presented in Tables 7 and 8 respectively. Total catch for the entire province (39,947) in 1985 decreased by 8% from 1984 and by 12% from the previous five-year mean. Effort and CPUE decreased by 2% and 6% respectively. The catch of grilse for insular Newfoundland (36,552) showed a 7% decrease from 1984 and 7% from the five-year mean. Effort declined by 2% from 1984 and CPUE by 9%. For Labrador, the catch of grilse (3,101) increased by 6% over 1984 while large salmon (294) decreased by 42%; total catch (3,395) decreased only slightly. Compared to the previous five-year mean, grilse decreased by 24%, large salmon by 51%, and total catch by 27%. Effort decreased from 1984 (11%) while CPUE showed an increase (10%).

ACKNOWLEDGMENTS

We thank the field staff of Resource Management Division, Fisheries and Habitat Management Branch, for preparing the daily reports, Program Coordination and Economics Branch for data collection, and Statistics and Computing Services for data processing, Neil Hefford for drafting, and K. Harding for typing.

Table 1. Periods of salmon angling for all scheduled rivers in Newfoundland and Labrador for 1985.

Waters	Open	Close
Newfoundland		
Three sets of opening/closing dates were set for most rivers in three respective areas of the island portion of the province:		
(a) Cape Ray, north to and including Bonne Bay	June 8	Sept 2
(b) Cape Bault to Cape Ray (east and south coasts)	June 15	Sept 8
(c) North of Bonne Bay to Cape Bauld	June 20	Sept 2
The following rivers are exceptions within these areas:		
Northwest Brook, Grand Bay	June 1	Sept 2
Bear Cove River	June 1	Sept 2
Conne River	June 8	Sept 2
Garnish River	June 8	Sept 2
St. Genevieve River	June 8	Sept 2
Ten-Mile Lake and tributary streams	June 8	Sept 2
Round Lake	June 8	Sept 2
Lower Humber River	June 8	Sept 2
Upper Humber River (Deer Lake to Big Falls)	June 8	Sept 15
Southeast River, Placentia	June 22	Sept 2
Northeast River, Placentia	June 22	Sept 2
Indian River	June 22	Sept 2
Exploits River	June 22	Sept 2
Terra Nova River	June 22	Sept 2
Little Salmonier River	June 22	Sept 2
West River, St. Barbe	June 22	Sept 2
Fox Island River	June 22	Sept 2
Watson's Brook	June 22	Sept 2
Little Codroy River	July 1	Sept 2
Harry's River	July 1	Sept 2
Little Barachois River	July 1	Sept 2
Torrent River and tributaries will be open when it has been determined that 1000 salmon have passed upstream through the fishway; an announcement will be made at the appropriate time. This river will close Sept 2.		

Table 1 (cont'd)

Waters	Open	Close
Labrador		
Pinware River	June 8	Sept 15
Forteau River	June 8	Sept 15
Lanse au Loup River	June 8	Sept 15
All other rivers	June 15	Sept 15
Closed for the season		
Colinet River		
Tides Brook (Mortier Bay) and tributaries		
Highlands River		
Serpentine River and tributaries		
Hughes Brook		
Goose Arm River		
Cook's Brook		
Parker's River		
Western Brook and tributaries		

Table 2. Closures of scheduled rivers during the angling season 1985.

River	
Exploits River	- Closed June 22-September 2 - that section of the river between the fish ladder at Grand Falls and where Stoney Brook enters the river downstream from Grand Falls.
Terra Nova River	- Closed July 11-September 2 - that section of river from the fishway at the lower end of Terra Nova Lake upstream to Mollyguajeck Falls and those tributaries that flow into the section set out above.
Northeast Brook, Trepassey	- No open season - entire river.
Northeast Brook, Canada Bay	- August 13-September 4 - entire river including tributaries.
Eastern Brook, Canada Bay	- August 13-September 4 - entire river.
Exploits River	- August 13-December 31 - Stoney Brook, Three Brook and Little Rattling Brook tributaries of Exploits.
Woodstock River	- August 15-September 4 - entire river.
Burlington River	- August 15-September 4 - entire river.
South Brook, Halls Bay	- August 15-September 4 - that section and its tributaries that are above South Pond.
Tommy's Arm River	- August 15-September 4 - entire river including tributaries.
Extension to open season in 1985	
Salmonier River, St. Mary's Bay	- September 9-15 - that section of the river from its mouth upstream to Vickers Road.
Colinet River, St. Mary's Bay	- September 9-15 - that section of the river from its mouth upstream to the counting fence.
North Harbour River, St. Mary's Bay	- September 9-15 - that section of river from its mouth upstream to the lower end of the spawning channel.

Table 3. Angled catch, effort and catch per unit effort of Atlantic salmon in Newfoundland and Labrador (Newfoundland Region), 1953-85. Five-year means and standard deviations are included.

Year	Effort (rod days)	Grilse (< 2.7 kg)	Salmon (≥ 2.7 kg)	Total catch	CPUE	Percent grilse
